

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph [0035] on page 13, as follows:

[0035] FIG. 4A is a drawing showing a structure of the separated layers, and an upper layer 123a and a lower layer 123b are shown. Here, the upper layer a-123a is a layer to be displayed at a frontmost position, and the lower layer 123b is a layer to be displayed at a posterior position in a display.

Please amend the paragraph [0122] on page 31, as follows:

[0122] The emulation mode setting unit 642 is a processing unit to perform a key emulation of an input signal of the operation input unit 641. Here, the key emulation means that the operation by the operation input unit 641 emulates an operation of the input device of the PC 560. For example, in the emulation mode setting unit 642, a mode for a key emulation is assigned to a fixed button of the remote controller-~~641~~ 640, and the mode is activated when the button pressing operation is accepted.
